

Project Design Phase
Problem – Solution Fit Template

Team ID	SWTID-2026-7595
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ☐ Solve complex problems in a way that fits the state of your customers.
- ☐ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☐ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ☐ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☐ **Understand the existing situation in order to improve it for your target group.**

Template:

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS - Students and teachers using the school IT helpdesk. - IT staff who review and route support tickets.	6. CUSTOMER CONSTRAINTS CC - Multiple support requests arrive daily. - IT staff manually review each ticket and assign a category. - The manual process is time-consuming, error-prone, and not scalable. - The solution must be easy to maintain and scalable.	5. AVAILABLE SOLUTIONS AS - Manual review and categorization by IT staff. - ServiceNow incident/ticket form for recording requests. - Manual communication with callers after ticket creation.	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS J&P - Identify the issue type. - Select the correct category and subcategory. - Inform the caller about ticket creation. - Automatically classify IT tickets based on the issue description.	9. PROBLEM ROOT CAUSE RC The school IT helpdesk receives multiple support requests related to network connectivity, hardware failures, account access problems, and system performance issues. IT staff manually review each ticket, making the process time-consuming, error-prone, and difficult to scale as requests increase.	7. BEHAVIOUR BE Students create a new IT support ticket by entering the Caller Name and Short Description. IT staff otherwise review the description, select the category and subcategory, and communicate ticket creation.	
Focus on J&P, tap into BE, understand RC	3. TRIGGERS TR - Wi-Fi issues - Projector failures - Password or login problems - Slow or hanging computers	10. YOUR SOLUTION SL ServiceNow Flow Designer evaluates predefined keywords in the Short Description and automatically assigns the appropriate Category and Subcategory. It then sends an email notification to the caller. The solution is no-code, easy to maintain, and scalable.	8. CHANNELS of BEHAVIOUR CH - Submit an IT support ticket through the ServiceNow form. - Enter Caller Name and Short Description. - Receive an automated email notification.	Extract online & offline CH of BE
	4. LIMITATIONS: BEFORE / AFTER EV Before: manual classification is time-consuming and inefficient. After: tickets are automatically classified and the caller receives an email notification.		8.2 OFFLINE - School IT helpdesk receives and handles support requests. - IT staff use standardized ticket categories and subcategories.	
Identify strong TR & EM
