

Project Design Phase

Solution Architecture

Team ID	SWTID-2026-7595
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Solution Architecture:

The Auto Ticket Classification using Flow Designer solution connects the school IT helpdesk problem with a ServiceNow no-code workflow. It automates ticket classification, improves routing efficiency, and provides email confirmation to the caller.

- Students enter Caller Name and Short Description in the Incident WorkFlow record.
- Flow Designer triggers when a record is created and Category is empty.
- Predefined keywords automatically set Category and Subcategory:

Wi-Fi → Network/Wi-Fi; Projector → Hardware/Projector; Password/Login → Access/Forgot Password; Slow/Hanging → Performance/Slow Computer.

- The flow sends an email confirmation to the caller after classification.
- The solution is no-code, maintainable, scalable, and reduces manual effort and classification errors.
