

Project Design Phase
Proposed Solution Template

Team ID	SWTID-2026-7595
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	The school IT helpdesk receives multiple incident requests daily from students and teachers, such as Wi-Fi issues, projector failures, password problems, and slow computers. Currently, IT staff manually review each request and assign a category, which is time-consuming and inefficient. This project automates ticket classification using ServiceNow Flow Designer by analyzing keywords in the incident's short description and description fields.
2.	Idea / Solution description	When a student creates a new IT support ticket, the student enters the Caller Name and Short Description. A Flow Designer automation evaluates predefined keywords such as WiFi, Projector, Password, or Slow and automatically assigns the appropriate Category and Subcategory. The flow also sends an automated email notification to the caller upon ticket creation.
3.	Novelty / Uniqueness	The solution uses ServiceNow Flow Designer to provide a completely no-code, easily maintainable and scalable automation. It automatically classifies tickets based on predefined keywords, assigns Category and Subcategory without manual intervention, supports dependent choice logic between Category and Subcategory, and sends an automated email notification to the caller.
4.	Social Impact / Customer Satisfaction	The automation reduces manual effort for IT agents, improves ticket routing efficiency, ensures consistent classification, eliminates

		human error, and improves communication by acknowledging ticket creation to the caller. It is designed for a school IT helpdesk and supports a structured and standardized way of storing ticket information.
5.	Business Model (Revenue Model)	The project is an internal school IT helpdesk automation solution implemented using ServiceNow Flow Designer. The source project document does not specify a revenue model. Its value is in reducing manual effort, improving routing efficiency, and providing a maintainable no-code workflow.
6.	Scalability of the Solution	The solution is easy to maintain and scalable. It uses a no-code Flow Designer workflow and structured Category/Subcategory choices. The design can be extended in the future to include advanced features such as assignment automation, SLA tracking, or predictive intelligence.
